

HW #3

Data from the California Housing Prices from the StatLib repository is available in Blackboard. This dataset is based on data from the 1990 California census. While not exactly recent, it does possess many qualities for learning and interpretation.

Here are the assigned tasks:

1. Study the data, plot it, make sure it makes sense.
2. Select four categories and perform an analysis of the data using methods discussed in class.
3. Provide comments and insights regarding the analysis performed in step 2.
